

Please note that all of this is the rough wireframe for what is the interface:

| <div> <div>First name Last Name</div> <div>Phone: 123</div> <div>Email: email</div> <div>Projects: 10 Roles: 15 VIEW ALL</div> </div> | <p>Task 1: add project count + role count to contact details. Story Points: 2-3 (may be difficulty in calculating total roles, may add unneeded complexity)</p> <p>Task 2: Set up view all buttons. Story Points: 1-2 (should be straightforward to set up action and likely a reusable button style we will use, Communicate with other developers if they are already working on Project role table for actions.)</p> | | | | | | | | | | | | |
|---|---|------|----------------|----------------|---------------|-------|---------------|-------|---------------|--------------|----------------|--|--|
| <div> <div>First name Last name </div> <table> <thead> <tr> <th>Project</th><th>Role</th></tr> </thead> <tbody> <tr> <td>Southern Plant</td><td>Manager, Admin</td></tr> <tr> <td>Nothern Plant</td><td>Admin</td></tr> <tr> <td>Western Plant</td><td>Admin</td></tr> <tr> <td>Eastern Plant</td><td>Select Roles</td></tr> <tr> <td>Select Project</td><td></td></tr> </tbody> </table> </div> | Project | Role | Southern Plant | Manager, Admin | Nothern Plant | Admin | Western Plant | Admin | Eastern Plant | Select Roles | Select Project | | <p>Task 1: set up modal. Story point: 1 if a modal template is already available, 3 if reusable modal or size refactor required.</p> <p>Task 2: populate grid with data. Story Points: 3 (hopefully a straightforward query for contactID to fetch all roles. Likely wont get contacts with 1000s but on paper it is possible)</p> <p>Task 3: implement delete button modal action. Story Points: 1.</p> <p>Task 4: implement dropdowns in components. Story Points 3. More if depending on how much of a pain implementing preselected data is. Also need to be mindful that in real conditions roles and projects may be pulled from external source. Will need to rescope if and increase story points.</p> |
| Project | Role | | | | | | | | | | | | |
| Southern Plant | Manager, Admin | | | | | | | | | | | | |
| Nothern Plant | Admin | | | | | | | | | | | | |
| Western Plant | Admin | | | | | | | | | | | | |
| Eastern Plant | Select Roles | | | | | | | | | | | | |
| Select Project | | | | | | | | | | | | | |
| <div> <div>Select project </div> <div> <div>South plant</div> <div>North plant</div> <div>east plant</div> <div>west plant</div> <div>center plant</div> </div> </div> | <p>Task: Select project and Save data after project selection. Story Points: 3. Saving and allowing the role selection to be usable</p> <p>Consideration: May consider using search select rather than dropdown due to potentially hundreds of projects. Story Points would increase.</p> <p>Different projects may have different roles but for now will assume all roles are the same across projects. Will change how data is loaded in.</p> <p>It is assumed a generic dropdown component is available.</p> | | | | | | | | | | | | |

| | |
|---|---|
| <div data-bbox="207 210 545 705"> <div> Select Roles ▼ </div> <div> <input type="checkbox"/> Managers <input type="checkbox"/> Admin <input type="checkbox"/> Supervisor <input checked="" type="checkbox"/> general user <input checked="" type="checkbox"/> staff </div> </div> | <p>Task: Select role for project. Story Points: 3.</p> <p>In test code there will not be categories but is a possible future consideration. Selecting roles will update project roles.</p> <p>It is assumed a generic accordion/listbox component is available.</p> |
| <div data-bbox="207 747 799 1100"> <div> Are you sure you want to delete this row? <div>×</div> </div> <div> Doing so will PERMANENTLY remove roles for projects. </div> <div> <div>Confirm</div> <div>Cancel</div> </div> </div> | <p>Task 1: Create confirmation modal, Hopefully it already exists but if not create something reusable. Story Points: 1-3</p> <p>Task 2: Setup cancel delete action. Story Points: 2.</p> <p>Task 3: Setup delete confirm action. Will close modal and delete project role entry on system. Story Points 3.</p> |

A Note about Story Points:

Story points is a tool for estimation that differs from person to person and team to team. The below table will give a rough approximation of what the Story Points would equate to within this context:

| Story Point(s) | Time estimate |
|----------------|--------------------------|
| 1 | Roughly 30 min - 1 hours |
| 2 | 1 - 2 hours |
| 3 | 2 hours - ½ day |
| 5 | 1 day |
| 8 | Several days |

It is assumed that BE will have the systems in place before FE can implement changes. A rough version of what the model for ContractRole Looks like this:

```
export type ContactRole = {  
  projectID: number,  
  contact: Contact['id'],  
  role: Role[],  
}
```

ProjectID is assumed to be a number in this example.
